Following the video that you have watch and article that I ask you to read please answer the ff: question using your own words in 2–3 sentences based on the provided source material.

1. What are the four primary factors that will differentiate a data analyst candidate in 2026?

Ans: In 2026, what really sets a data analyst apart is how well they can solve problems understand the business communicate insights, and show real project experience it is not just about knowing tools anymore it's about how you use them to create value companies are looking for people who can think critically and turn data into decisions

2. How does domain knowledge provide a competitive advantage over purely technical candidates?

Ans: Domain knowledge helps an analyst understand what the data actually means in a real world situation it allows them to ask smarter questions and give insights that actually matter to the business

3. What is the "lean tech stack" recommended for a foundational data analyst role?

Ans: A lean tech stack focuses on the essentials like SQL Excel and Power BI these tools are enough to collect analyze and present data effectively the idea is to master the basics first instead of trying to learn everything at once

4. Distinguish between "learning projects" and "showing projects."

Ans: Learning projects are done while studying and by following tutorials to build skills.

Showing projects are more polished and are meant to prove your ability to solve real problems independently

5. According to the roadmap, why is Python often deprioritized for mid-career data analyst positions?

Ans: Python is sometimes less of a priority because most data analyst tasks rely heavily on SQL and dashboards at the mid career level the focus on insights and business impact rather than coding in python becomes more useful if you move into more advanced or technical roles

Questions on SQL-Base on the Article Posted

6. Why is establishing the "Business Context" essential for an analyst? What is a Business Context?

Ans: Business context means understanding the purpose behind the data what problem you are trying to solve and why it matters and important because it guides your analysis and helps you avoid drawing the wrong conclusions. Without business context the data can easily be misunderstood

7. According to the text, how does SQL function as a "flashlight"?

Ans: SQL works like a flashlight because it helps you focus on specific parts of a dataset and instead of getting too much data you can zoom in on what's important it helps reveal patterns and answers step by step

8. Why is the validation step considered a professional necessity rather than an optional task?

Ans: Validation is important because it ensures your results are correct before sharing them even small mistakes in data can lead to big problems in decision-making and that's why professionals always double check their works.

9. What defines "good SQL" according to the author's standards?

Ans: Good SQL is not just about getting the right answer it should be clean, easy to read, and efficient other people should be able to understand your query without confusion

10. Describe the fundamental mindset shift required to move from being a student to being an analyst.

Ans: The biggest shift is moving from just answering questions to actually solving problems As an analyst you need to think deeper and ask why something is happening and also provide useful insights it is about being responsible for the impact of your analysis not just completing a task
